## **Host checker**

Client computers can be checked both prior to and during a session to verify an acceptable device security posture requiring installed/running endpoint security applications (antivirus, firewall, other).

Host checker also supports custom-built checks including verifying ports opened/closed, checking files/processes and validating their authenticity with Message Digest 5 (MD5) hash checksums, verifying registry settings, machine certificates, and more. Includes cache cleaner that erases all proxy downloads and temp files at logout.

## **Endpoint auto-remediation**

Automatically remediates non-compliant endpoints by updating software applications that do not comply to corporate security policies. Does not require Microsoft's SMS protocol for remediation and covers patches for not only Microsoft, but other vendors such as Adobe, Firefox, Apache, realPlayer, etc. Directly downloads missing patches from vendor's website without going through the SA Series appliance.

### **Web-based SSO forms-based, header variable-based, SAML-based**

Provides ability to pass username, credentials, and other customer-defined attributes to the authentication forms of other products and as header variables.

### **Web-based SSO basic authentication and NT LAN Manager (NTLM)**

Allows users to access other applications or resources that are protected by another access management system without re-entering login credentials.

### **Password management integration**

Provides a standards-based interface for extensive integration with password policies in directory stores (LDAP, Microsoft Active Directory, NT, and others).

### **Network connect (Nc)**

Provides complete network-layer connectivity via an automatically provisioned cross-platform download; Windows Logon/GINA integration for domain SSO; and installer services to mitigate need for admin rights. Allows for split tunneling capability.

### **IPsec/IKEv2 support for mobile devices**

Allows remote users to connect from devices such as PDAs, mobile devices, and smartphones, which support

IKEv2 VPN connectivity. Administrators can also enable strict certificate authentication for access via IPsec/IKEv2. Also enables username/password authentication through Extensible Authentication Payload (EAP), whereby IKEv2 provides a “tunnel” mechanism for EAP authentication.

### **cross-platform support**

Provides the ability for any platform to gain access to resources such as Windows, Mac, Linux, or various mobile devices including iPhone, WinMobile, Symbian, and Android.

### **Hardened security appliance**

Designed on a purpose-built operating system.

### **Secure virtual workspace**

A secure and separate environment for remote sessions that encrypts all data and controls I/O access (printers, drives).

### **Anti-malware support with Enhanced Endpoint Security**

Dynamically download Webroot’s market-leading anti-malware software to enforce endpoint security on devices that might not be corporate-assigned computers being used for network access.

### **Policy-based enforcement**

Allows the enterprise to establish trustworthiness of non-API-compliant hosts without writing custom API implementations or locking out external users, such as customers or partners who run other security clients.

### **Enterprise licensing**

Allows any organization with one or more device to easily lease licenses from one appliance to another as required to adapt to changing organizational needs.

### **customizable user interface**

Allows for creation of completely customized sign-on pages.

### **Extensive directory integration and broad interoperability**

Existing directories in customer networks can be leveraged for authentication and authorization, enabling granular secure access without re-creating those policies

### **ActiveSync feature**

Provides secure access connectivity from mobile devices (such as Symbian, Windows Mobile, or iPhone) to the Exchange server with no client software installation.

Enables up to 5000 simultaneous sessions on the SA6500.

### **Mobile-friendly SSL VPN login pages**

Provides predefined HTML pages that are customized for mobile devices, including Apple iPhones and iPad, Google Android, and Nokia Symbian devices.

### **Dynamic role mapping with custom expressions**

combines network, device, and session attributes to determine which types of access are allowed. A dynamic combination of attributes on a per-session basis can be used to make the role mapping decision.

### **resource authorization**

Provides extremely granular access control to the URL, server, or file level for different roles of users.
